(54) MAGNETIC CARD ISSUING CONTROL METHOD

COPYRIGHT: (C)1995,JPO

(57) Abstract:

PURPOSE: To shorten retrieval time, efficiently perform a work and to protect security by encoding the value information corresponding to bar code information in a magnetic card, making a pair of value information and bar code information and storing the information in a medium.

CONSTITUTION: When a card is newly issued, an encode FD 20 where only encode information is preliminarily stored is inserted into the drive of the personal computer installed in an encoder 1 and is set. In an unrecord card 10 where the encoder information is to be encoded, the bar code corresponding to the encoder information is printed. The unrecord card 10 is supplied to the card supply part of the encoder 1 and the bar code 7 is read by a bar code reader. The read bar code information is added to an encode FD 20, is made a pair of encode information and is stored in the encode FD 20, and an encode FD 201 is constructed.
